

# DISPLAYEDUX

## Portfolio Website — Project Handoff v9

Danny Driscoll · March 2026

Session focus: Decision audit across Handoff v1–v8. All open decisions resolved and locked. Source of truth for Contact page build, case study pages, and Netlify deployment.

Active branch: design-v2

Deployment: Netlify

Dev server: npm run dev from project root

Vercel: removed from plan

### 01. Current Build State

| Page / Item                       | Status  | Notes                                                                                       |
|-----------------------------------|---------|---------------------------------------------------------------------------------------------|
| Homepage /                        | DONE    | Nav, hero, stats, case study cards, origin, philosophy, footer. Complete.                   |
| Work /work                        | DONE    | Dark mode fix applied. Text colors use CSS variables.                                       |
| About /about                      | DONE    | Bio, stats, skill cards, interests, videos, photography teaser. Three-signal links applied. |
| Photography /photography          | DONE    | Empathique, Carl photo, photo grid, Papa Carl quote. Light/dark confirmed.                  |
| Contact /contact                  | TODO    | Spec defined this session. TeleSign-powered form. See Section 04.                           |
| Case study: Self-Service Portal   | PARTIAL | Hero updated. Body sections present. Full narrative not built.                              |
| Case study: Fraud Prevention      | PARTIAL | Hero at 0% 60%. Body sections present.                                                      |
| Case study: Messaging API         | PARTIAL | All image paths fixed. Body not built.                                                      |
| Case study: Universal College App | PARTIAL | All paths confirmed. Body not built.                                                        |
| Netlify deployment                | TODO    | netlify.toml and plugin in place. Repo not yet connected.                                   |

### 02. Confirmed Decisions — All Locked

These were open or drifting across handoff versions. All are now resolved.

#### Deployment

|                 |                                                                                                  |
|-----------------|--------------------------------------------------------------------------------------------------|
| Platform        | Netlify. Changed from Vercel at v8. Netlify confirmed.                                           |
| Config in place | netlify.toml exists at project root. @netlify/plugin-nextjs in devDependencies.                  |
| Next step       | Push design-v2 branch to GitHub. Connect repo to Netlify. Select design-v2 as production branch. |

|               |                                         |
|---------------|-----------------------------------------|
| Build command | npm run build. Publish directory: .next |
|---------------|-----------------------------------------|

## Navigation

|                  |                                                            |
|------------------|------------------------------------------------------------|
| Items (in order) | Home, Work, About, Photography, Contact                    |
| Count            | 5 items. At guideline cap. Acceptable.                     |
| Photography      | Stays in nav as a standalone item. Not moved inside About. |

## Case Studies

|                       |                                                                                                       |
|-----------------------|-------------------------------------------------------------------------------------------------------|
| Count                 | All four stay. No cuts.                                                                               |
| Card titles           | Keep current descriptive titles. Add quantified outcome sub-copy beneath each title on the work grid. |
| Launch state          | Launch with heroes and placeholder sections. Body content is post-launch priority.                    |
| View case study links | Must be hidden or point to a coming-soon state before launch. Not left as broken links.               |
| Before/after imagery  | Not yet located or created. Post-launch priority. Do not block launch.                                |
| Build order           | Self-Service Portal first. Richest asset library.                                                     |

## Link Treatment

|              |                                                                                                           |
|--------------|-----------------------------------------------------------------------------------------------------------|
| Rule         | Three signals required: (1) color #3B5CE8, (2) underline offset 3px thickness 1px, (3) chevron SVG arrow. |
| Chevron size | Reduce size and weight. Make it smaller and subtler than current implementation.                          |
| Exemptions   | Nav links and button CTAs (full-border buttons) are exempt. Border serves as third signal for buttons.    |
| Applied to   | About page, Footer, CaseStudyTemplate prev/next nav.                                                      |

## Eyebrow Labels

|                   |                                                                                     |
|-------------------|-------------------------------------------------------------------------------------|
| Color             | var(--color-text-secondary) only. Never #3B5CE8.                                    |
| Reason            | Blue fails WCAG AA at small sizes in dark mode (~3.8:1 contrast).                   |
| Blue reserved for | Stat numbers, interactive links, skill badge pills, active nav underline indicator. |
| Status            | Fixed on About page at v8. Verify homepage and work page have not reverted.         |

## MOV to MP4 Conversion

Skipped. Lower priority. Revisit post-launch if the video needs to be added.

### 03. Design System — Locked Decisions

Do not revisit these. They are resolved.

|                     |                                                                                                                |
|---------------------|----------------------------------------------------------------------------------------------------------------|
| Light mode default  | Confirmed. Toggle saves to localStorage. design-v2 branch has both modes.                                      |
| Dark mode system    | [data-theme="dark"] attribute selectors on <html>. Never Tailwind dark: utilities.                             |
| Tailwind v4 config  | tailwind.config.ts is ignored. All tokens in @theme inline block at line 82 of globals.css.                    |
| Hardcoded utilities | bg-brand-offwhite, text-brand-charcoal etc. bypass CSS variable system and break dark mode. Use CSS variables. |
| Brand blue          | #3B5CE8                                                                                                        |
| Footer background   | #3B5CE8 (royal blue)                                                                                           |
| Rule of Three       | Every interactive or differentiated element must have three visual signals. Never rely on color alone.         |

### 04. Contact Page — Spec

This page has had no spec across all eight handoffs. The spec below is defined for the first time here and should be treated as the source of truth for the build session.

#### Content

|                      |                                                                                                                      |
|----------------------|----------------------------------------------------------------------------------------------------------------------|
| Contact info to show | All of Danny's contact information: email, phone, LinkedIn. Prominently placed.                                      |
| Form                 | Yes. Full contact form with name, email, phone, and message fields.                                                  |
| Form power           | TeleSign API integration. This is a portfolio statement: showing the product Danny designed, in use on his own site. |
| CTA copy             | Direct and human. One sentence. No friction language.                                                                |

#### TeleSign Integration — Three Options to Decide

Confirm which TeleSign product to use before building the form.

| Option                    | What it does                                                                                     | Portfolio signal                                                                                |
|---------------------------|--------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|
| SMS OTP verification      | User enters phone number, receives a one-time code via SMS, verifies before submitting the form. | Shows the exact product Danny designed in the Messaging API case study. Most direct connection. |
| Phone number intelligence | Validates the phone number entered in the form field. Checks carrier, line type, and             | Connects to the Fraud Prevention case study. Less visible to the user but shows                 |

|                      |                                                                                                                          |                                                                                            |
|----------------------|--------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
|                      | risk score before allowing submission.                                                                                   | backend intelligence.                                                                      |
| <b>Both combined</b> | Number intelligence validates the field on blur. OTP confirmation sends before final submit. Two-step verification flow. | Strongest portfolio statement. Shows full TeleSign product breadth. More complex to build. |

Decide which option before starting the Contact page build session. SMS OTP alone is the recommended starting point if timeline is a constraint.

## 05. Critical Project Rules — Never Violate

### Tailwind v4

|                            |                                                                                           |
|----------------------------|-------------------------------------------------------------------------------------------|
| <b>Config file</b>         | tailwind.config.ts is completely ignored. Never create or edit it.                        |
| <b>Single @theme block</b> | Only one @theme inline block. It lives at line 82 of globals.css. Never add a second one. |
| <b>Dark mode</b>           | [data-theme="dark"] attribute selectors only. Never Tailwind dark: utilities.             |
| <b>Dark mode location</b>  | All dark mode styles go in globals.css as [data-theme="dark"] .classname selectors.       |

### File Edit Rules

|                            |                                                                                                                          |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------|
| <b>Never use sed</b>       | sed silently corrupts TSX/JSX. Use Python string replacement only.                                                       |
| <b>Cat before writing</b>  | Always cat the file immediately before writing replacement strings. Never reuse strings from earlier in conversation.    |
| <b>Template literals</b>   | Backticks in Python heredocs must be actual characters, never escaped. Grep-verify after any JSX file write.             |
| <b>Verify after write</b>  | Always run wc -l and head -5 after writing. Then screenshot before reporting.                                            |
| <b>MISS branch</b>         | Every Python replacement must include a MISS branch that prints the unmatched string.                                    |
| <b>Read before writing</b> | Inspect relevant files before proposing changes. Both major session failures stemmed from writing without reading first. |

### Dev Server Rules

|                            |                                                                                             |
|----------------------------|---------------------------------------------------------------------------------------------|
| <b>Danny runs server</b>   | Claude never starts or stops the dev server unless explicitly asked.                        |
| <b>Check server first</b>  | Before any browser action, confirm server is running at localhost:3000.                     |
| <b>After branch switch</b> | rm -rf .next before restarting.                                                             |
| <b>Turbopack panic</b>     | pkill -f "next dev" then cd to project root and npm run dev. Also wipe node_modules/.cache. |

Command Labeling

|                 |                                                                                                               |
|-----------------|---------------------------------------------------------------------------------------------------------------|
| Label placement | CLAUDE CODE or TERMINAL goes as plain text on the line directly above the code block. Never inside the block. |
| CLAUDE CODE     | All development work: file edits, npm commands, dev server, bash in portfolio directory.                      |
| TERMINAL        | Danny's Mac Terminal only. Use for pasting output back.                                                       |

Document Output Rule

|                |                                                                                              |
|----------------|----------------------------------------------------------------------------------------------|
| Every document | Must be presented as BOTH .docx AND .pdf every single time. No exceptions.                   |
| Validation     | Always validate .docx files after creation using the validate.py script from the docx skill. |

Critical File Locations

|                     |                                                                |
|---------------------|----------------------------------------------------------------|
| Nav component       | components/layout/Nav.tsx (NOT app/components/)                |
| Footer component    | components/layout/Footer.tsx (NOT app/components/)             |
| Global CSS          | app/globals.css — single source of truth for all theme tokens  |
| @theme inline block | Line 82 of globals.css — authoritative Tailwind v4 token block |
| About dark mode CSS | Lines 515-600 of globals.css — Block 9, all about-* selectors  |
| About page          | app/about/page.tsx                                             |
| Photography page    | app/photography/page.tsx                                       |
| Project root        | ~/Desktop/Claude/portfolio/claude-written/danny-portfolio      |

06. Next Session Starting Point

Step 1 — Confirm the TeleSign integration option for Contact page (see Section 04)

Step 2 — Build /contact following dark mode patterns from corrected pages. Apply three-signal link treatment. Eyebrow labels use var(--color-text-secondary).

Step 3 — Reduce chevron arrow size sitewide on all three-signal links.

Step 4 — Verify eyebrow labels on homepage and work page have not reverted to blue.

Step 5 — Hide or placeholder-state the four View case study links before deployment.

Step 6 — Netlify deployment: connect repo, select design-v2, confirm build, test all routes on live URL.
